

Vertical Shaft Impactor (VSI)

"DUROMECH" impact crusher intakes large rocks or stones fed in from the central opening, which are then disintegrated into small size gravels. After the stones are cut down into small gravels, they are then shaped to look like even sized cubes.

Our vertical shaft impact crushers are designed in such a way that they produce extensively fine material ranging in between 0 to 4.75mm or 0 to 10mm respectively. Our machines are tagged as one of the most reliable and extremely capable alongside being completely beneficial and easy to use for those who opt to procure them.

Advantages

- Easy portability and quick installation with minimum support structures and variable capacity models for tertiary applications.
- Rock-on-Rock technology minimizes wearing of parts, hence minimum operating and wear costs.
- Simple yet elegant retrofit option for converting "rock on rock" to "rock on metal".
- More cubical crushing compared to any other machine.
- Suitable for : Ready-Mix Concrete, Artificial Sand, Asphalt Mix, Base Material for Road Work.
